

The holders labelled with ER are equipped with the licensed EROWA centering plate **without** preparation for the EWIS chip.

The holders labelled with EWIS are equipped with the licensed EROWA centering plate and **with** the M5 borehole for the EWIS chip retainer (option).

F-Tool holder with EROWA interface

Electrode holder, equipped with the repeat accurate ITS centering plate 50, assembled on the premium, stainless high-grade steel-basis plate. Incl. aluminium application for the shaft collet of divers diameters. Adapted for clamping of copper- and graphite blanks and for high-precision handling of electrodes in the ITS clamping system and for the following application on the EDM plant.

The length of H = 66 mm has the advantage of an optimal sight when setting up and that shorter electrodes can be inserted, so the barrel chuck doesn't dip into the dielectric fluid.
